

Title:

Yu-Gi-Oh! Goat Format Deck Builder

Description:

Yu-Gi-Oh! is trading card game and Goat Format is a specific rule list (read more: <https://www.goatformat.com>). Many of the other deck builders for Yu-Gi-Oh! that exist do not support the Goat format as well as I would like, most of them are tailored to other rulesets. I would like to make a website where you could create, publish, and view deck lists specifically for the Goat format. I would also like the website to have list of the card available in Goat format as well as the rules and locations players can play at.

Pages:

- Home Page
- Deck Builder
- Published Decks
- Card List
- Rules
- Where to play

Data:

- A card list of all the currently playable cards in Goat format (this can change depending on rule changes) (only admins will be able to edit this)
- Users saved and published deck lists. (only users who made their deck lists can modify their own deck lists) (admins can delete and modify any deck list)
- User accounts with different security levels (for regular users and admins)
